

Hey. I have bad news for you!

We hacked your device's operating system and got full access to your account . We have been watching you closely for a long time.

We installed a virus on your system that allows me to control all your devices.

The virus software gives us access to all the controllers of your devices (microphone, video camera, keyboard,

display). We have uploaded all your information, data, photos, browsing history to us servers. We have access to all

your messengers, social networks, email, sync, chat history and contact list.

We have some very interesting video footage from the camera of your device. And some more compromising data on you. I hope you know what I'm talking about.

We can send this data to all your friends via email, social networks and instant messengers.

They will learn a lot about you

If you don't want we to do it, send 250 \$ (US dollar) in this bitcoin wallet.

BTC address:

**bc1q52v3qu84rkymdhn9x6h3dpee9ha2g34umvv9y**

If you do not know how to replenish such a wallet, use the Google search engine. There is nothing difficult in this.

As soon as funds arrive, we will see this and immediately remove all this garbage. After that we will forget each

other. Our team also promise to deactivate and remove all malware from your devices. Trust me, We keep my word.

We give exactly two days (48 hours) from the moment of opening this letter for payment.

After this period, if we do not receive the specified amount from you, We will send everyone access to your accounts

and visited sites, personal data, and edited videos without warning.

Remember! We do not make mistakes, don't joke with us, we have many opportunities.

There's no point complaining about us because they can't find our team. Formatting the drive or destroying the device

won't help because we already have your data.

It makes no sense to write back - we do not write from personal mail and do not look at the answers.

P.S. In the future, we recommend that you follow the safety rules on the Internet and do not visit dubious sites.
